Chapter 1

RAPP Testing Tools

Synopsis

Testing tools used for RAPP Platform integration tests.

All tests use the RappCloud python module,`python-rapp-api`, to communicate with RAPP Platform AI modules.

Tests Directory

By default, this package containes basic, out-of-the-box, integration tests. These tests are located under:

“‘shell $ <rapp_testing_tools_package_path>/scripts/default_tests “‘

Executing Tests

The rapp_run_test.py script is used in order to execute developed tests.

Execution time arguments:

- [**-i**] : Give as input, the test name, to execute.

“‘shell $ ./rapp_run_test_.py -i face_detection_test_1.py “‘

- [**-n**] : Give number of execution of test(s).

“‘shell $ ./rapp_run_test.py -i face_detection_test_1.py -n 10 “‘

- [**-t**] : Run the test in threaded mode which means that multible invocations can be done, simultaneous. Each test execution is handled by a standalone thread.

“‘shell $ ./rapp_run_test.py -i face_detection_test_1.py -n 10 -t “‘

- [**-c**] : Test classes can be used to execute a spesific family of tests. Using test classes all tests, under this class, will be executed. In most cases a test class is named after the relevant RAPP Platform ROS-Package; [**face-detection, qr-detection, speech-detection, speech-detection-sphinx4, speech-detection-google, ontology, cognitive, tts**]

“‘shell $ ./rapp_run_test.py -c face-detection “‘

Note: If no test_name is provided as argument, all tests located under tests paths are executed!!

There are two ways of executing developed tests:

- Execute directly.
- Execute under the ROS framework.

Using the python executable, directly.

The below example executes the qr_detection_test_1, five times in sequential mode.

“‘shell $ ./rapp_run_test.py -i qr_detection_test_1.py -n 5 “‘

Using ROS framework

The below example executes all tests, once.

“‘shell $ rosrun rapp_testing_tools rapp_run_test.py “‘

Developing Tests

A template.py is located under the `default_tests` directory of the rapp_testing_tools package.

“‘shell $ <path_to_rapp_testing_tools_package>/scripts/default_tests “‘

Also several tests have already been developed, located under the default_tests directory. Those can be used as a reference for developing new tests.

Where to store developed tests

By default, developed tests are stored under the scripts/default_tests directory.

To define external tests directories, developers have to append that path into the params.yaml configuration file. This file is located under the config/ directory in this package.

Lets say for example that you want to store tests under:

“‘shell $ ${HOME}/rapp_integration_tests_external “‘

You can extend the path directories used by the test-engine to search under for python test source files. Just write down custom directory paths into the `params.yaml`) file.

“‘yaml tests_path:

- ’∼/rapp_integration_tests_external’ “‘

6.39.1 Function Documentation

6.39.1.1 def rapp_testing_tools.rapp_testing_core.append_to_system_path (*paths*)

Append directory paths, given as input into the global system path.

This is usefull in order to load test files under those directories.

Definition at line 140 of file rapp_testing_core.py.

6.39.1.2 def rapp_testing_tools.rapp_testing_core.execute_tests_all (*tests, numCalls, threaded*)

Load and execute input given tests.

Parameters

tests	List of tests to execute.
numCalls	Number of executions.
threaded	If true the execution is handled by threads.

Definition at line 187 of file rapp_testing_core.py.

6.39.1.3 def rapp_testing_tools.rapp_testing_core.get_test_files (*args, paths*)

Parse input paths and export found test files.

Parameters

args	Arguments.
paths	Path directories to look for test files.

Definition at line 151 of file rapp_testing_core.py.

6.39.1.4 def rapp_testing_tools.rapp_testing_core.load_tests_paths ( )

Parse and get all given tests path directories, plus the default ones.

Returns

Array of tests paths.

Definition at line 113 of file rapp_testing_core.py.

6.39.1.5 def rapp_testing_tools.rapp_testing_core.main ( )

Main.

Definition at line 254 of file rapp_testing_core.py.

6.39.1.6 def rapp_testing_tools.rapp_testing_core.parse_args ( )
